Stephanie:

EPA and CPG are going to need to discuss this latest set of locations prior to the CPG submitting a QAPP Addendum for this work.

Have a good weekend.

Thank you.

R/  
Rob

Hi Rob,

Attached is our response to your June 26, 2013 revised SSP2 locations, as modified based on the probing program that was conducted.

There are several locations that we had agreed to prior to the probing that were removed from your most recent submittal. As was stated in my May 23, 2013 email to you, at locations where probing indicates a core cannot be obtained, at least a grab sample should be collected. As such, you will see that we have added several locations to your proposal. Probing indicates that at least short cores may be able to be collected at some of these locations.

Attached are an updated table as well as a marked-up version of the figures - I think this is probably the easiest way to relay this information. As we have discussed, I understand you are currently updating the QAPP addendum and providing additional justification for the samples you are electing to collect. The current plan is to submit the revised QAPP addendum shortly after Labor Day, and then start sampling later in September.

Please let me know if you have any questions.

Thanks,  
Stephanie
